Portal Administration: Module Security

Module Security

Applying Security to a Portal Module

The Recipe Portal allows you to define which users can edit a particular module. For the most part you will only want Administrative users to edit portal modules, however, if you do wish to allow regular users to edit them, you will need to define that in the module settings.

1. Log into the Recipe Portal as an **Administrator**.
2. Go to the **Admin** Tab.
3. Under the Tabs section, **highlight the Tab** that contains the module you wish configure for security.
4. Click the ☐ **Edit** button.
5. Locate the module in the **Organize Modules** and highlight.
6. Click the ☐ **Edit** button.
7. Check the appropriate users in **Roles that can edit content**.
8. Click the **Apply Module Changes** link.
