Portal Modules: XML and XSL

XML/XSL Module

This module displays the result of an XML/XSL transform. The XML and XSL files are identified by their UNC paths in the xmlsrc and xslsrc properties of the module. The Xml/Xsl module includes an edit page, which persists these settings to the SQL database.

Example

XML Settings	
XML Data File:	<input type="text"/>
XSL/T Transform File:	<input type="text"/>
Update Cancel
