Multi Media Library: Media Files

[Previous](#) | [Media Overview](#) | [Next](#)

Media Files

The Recipe System can stream and display various multi media to end users. Anything from a simple image of an entree to a video containing prep instructions to a video detailing the 7 steps of customer service can be at the fingertips of your users.

All media files are managed from the Recipe Media Library. Simply browse to a supported local or network file to add it to the library. Images are uploaded to the recipe SQL database automatically. Video and flash files are not stored in the database, however the link (URL) to the file is stored. See below for a complete list of supported media file types.

Image Files

- JPG
- GIF
- PNG
- BMP

Video Files

- WMV
- MPG
- MOV
- AVI

Flash Files

- SWF
