Getting Around: Recipe Editor Display

[Previous](#) | [Next](#)

Recipe Editor Display

The recipe editor display consists of two window panes. They are the Recipe System window and the Viewing Grid.

Recipe System Window

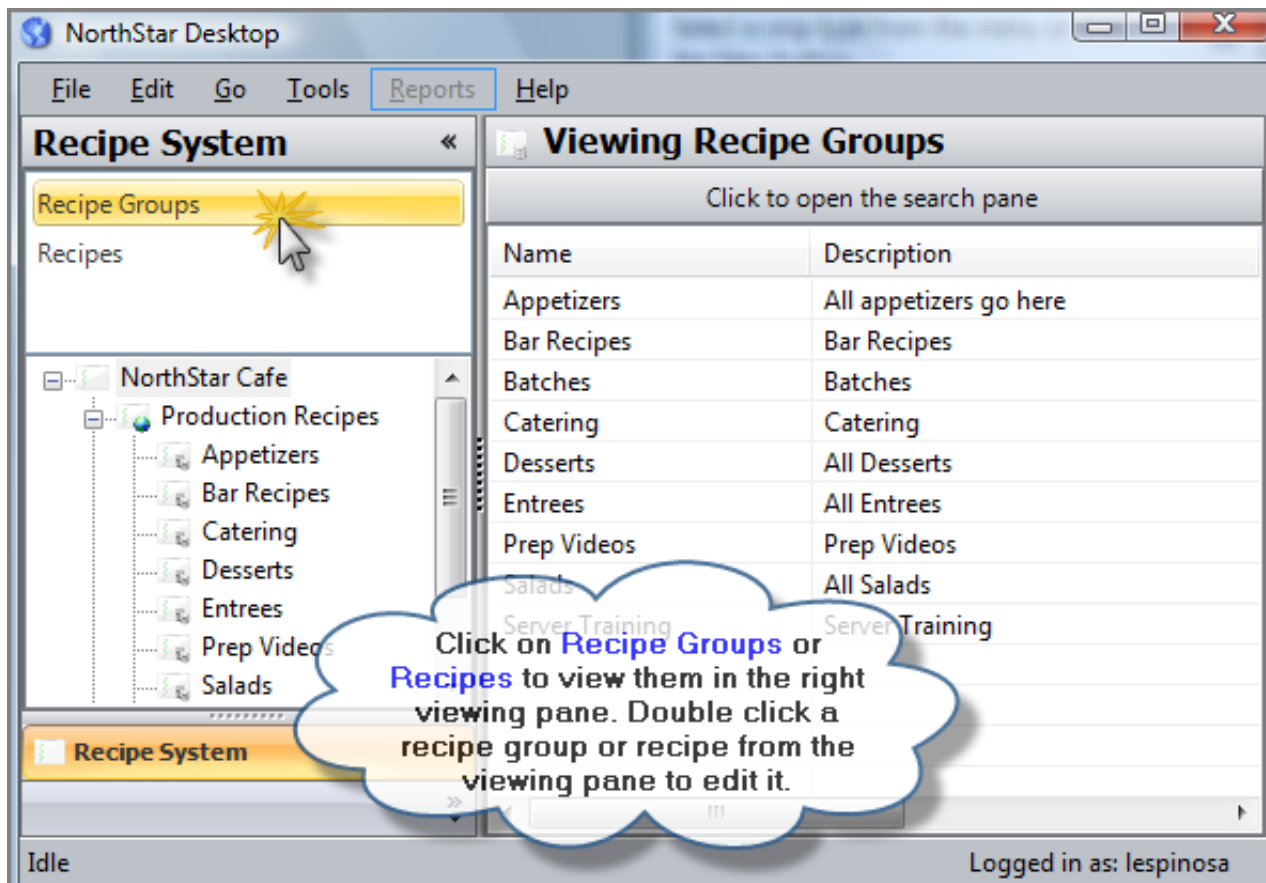

The Recipe System window is a drill down from the current recipe system you are managing to the categories, groups and recipes. The Recipe System window also allows you to quickly access recipe groups and recipes from the two links at the top of the window. Users can right click on the components in the Recipe System view to add new categories, groups, and recipes. An option to print also shows up from right clicking on any of those components.

Viewing Grid

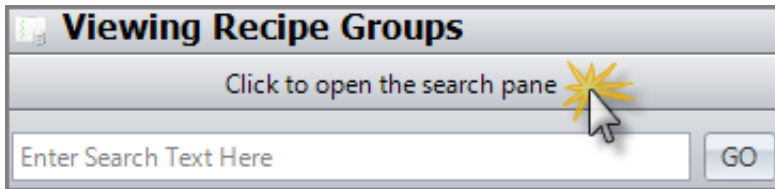

The viewing Grid displays the recipe groups and recipes that make up the recipe system. Users can drag and drop items from the Viewing Grid to the components in the Recipe System window. Double clicking on items in the Viewing Grid will open an edit menu where you can manage your recipe group or recipe.

The editor display lists the current system you are using. You can drill down the list of categories to get to the recipe groups. Clicking on a recipe group in the left pane will open a list of recipes. The recipes associated to that group will display in the right pane, or viewing grid.

Note: If a recipe appears in the viewing grid as "blue" it is not associated to any recipe group.

You can also use the search option from the viewing grid to search for recipes. For more on searching recipes, [click here](#).

The image shows a web interface titled "Viewing Recipe Groups". Below the title bar, there is a button labeled "Click to open the search pane" with a yellow starburst icon and a mouse cursor pointing at it. Below this button is a search input field with the placeholder text "Enter Search Text Here" and a "GO" button to its right.
