## SPCWIN UPDATES BY DATE

03/01/2017 - 03/31/2018

Report Number 39

Printed : 03/01/2018 17:14:27

---

**Exe Version** 6.41.0 **Date:** 02/28/2018 12:00

**Number:** 5915 **Product:** 6.41.0 VS

**Solution:**

1. Fix to prevent adding option to a check as a very first item through entering PLU number. The problem was that PrepOrder XML output was missing all ItemDetail sections details.
2. New: Populate check total amount (w/o tax) and total tax amount in the fields 'r' and 's' on every AT&UM transaction.
3. Fix for the DefaultPaymentType tag, that should apply only to the current XML order and the check for this XML order.
4. Fix for round up feature, where it re-enters last amount on a random check.

---

**Exe Version** 6.40 **Date:** 02/28/2018 09:00

**Number:** 5914 **Product:** 6.40/5.40

**Solution:**

1. Fix for the DefaultPaymentType tag, that should apply only to the current XML order and the check for this XML order.
2. Fix for round up feature, where it re-Enters last amount on a random Check.

---

**Exe Version** 6.41.0 **Date:** 02/22/2018 17:28

**Number:** 5911 **Product:** 6.41.0 VS

**Solution:**

1. Fixed an issue with "Post Payments to Cashier" and reopening a closed check. An accounting issue with the cashouts could occur.
2. Improvements for XML Ordering - where an order's check number or credit card authorization number may be damaged.
3. Improvements for Out of Stock and Specials where the count may be reduced, but not incremented, when a bounce order (Function 1, ErrorLevel 1) or a failed "New Order" or "Update Order" occurs.
4. Improvements for XML <ItemName> tag when using the inventory description. Modifiers are now included, as well as, main items.
5. General housekeeping improvements.
6. Improvements allow the START TAB option, when using EMV, to record the guest's name without waiting for approval of the card amount for Pre-Auth.
7. Improvements for Prep Sequence Name on View/Edit screen.
8. Improvements for AMEX cards and EMV, when using the Repeat option on CC AUTH. In some cases, the middleware may return an unexpected number of digits representing the card number. In these cases, when the user chooses REPEAT, the system may not display the new check total for approval.

---

**Exe Version** 6.41.0 **Date:** 02/07/2018 18:18

**Number:** 5908 **Product:** 6.41.0 VS

**Solution:**

Improved logic for AMEX transactions done via EMV. In some cases, the middleware may not return the expected number of digits when using an AMEX card. (The card number is masked when sent to POSitouch). When using the REPEAT option on the CC AUTH screen, the amount may be incorrect - reflecting only the outstanding balance of the check and not the new total of the check.

03/01/2017 - 03/31/2018

Printed : 03/01/2018 17:14:27

---

<b>Exe Version</b>	6.41.0	<b>Date:</b>	02/05/2018 15:58
<b>Number:</b>	5907	<b>Product:</b>	6.41.0 VS
<b>Solution:</b>	<ol style="list-style-type: none"><li>1. Fixed an issue with SPCWIN version 6.41.0 from 11/28/17, where, after an immediate system change, the wrong user may be displayed when another user logs into the system.</li><li>2. Out of Stock and XML Ordering improvements. In some cases, when an item is listed under Out of Stock and specials, if a "NEW" or "UPDATE ORDER" is received via XML Ordering, and the order fails, the item's count is reduced by one and not incremented. A bounce order (Function 1, ErrorLevel 1) had the same effect, lowering the count of the item, incorrectly.</li><li>3. Enforce the user privilege "Access Others' Tables" on Table View.</li><li>4. Improved XML Ordering and &lt;ItemName&gt; tag, using inventory description. Added logic to apply to modifiers, as well as, main items.</li><li>5. Improvements for XML Services and messages (where a large red box appears with a message). In some cases, the popup message may be behind standard POSitouch messages, causing POSitem to stop responding, since the user cannot confirm the popup message.</li><li>6. Improvements for Start Tab and EMV. Previously, users had to wait to ring in items until the preauth amount was approved, in order for the name on the card to be captured.</li><li>7. Improvements for Prep Sequence name on View/Edit.</li><li>8. Improvements for Check CVV and CVV Length when used in conjunction with gift cards.</li><li>9. New option. Setup &gt; Payment &gt; Forms of Payment &gt; Manager's Authorization Required? &gt; If Over: Allows users to set an amount, and if over that amount, requires a manager's approval.</li><li>10. Housekeeping improvements.</li></ol>		

---

<b>Exe Version</b>	POSitem.exe	<b>Date:</b>	01/19/2018 10:49
<b>Number:</b>	5906	<b>Product:</b>	(No Product Entered)
<b>Solution:</b>	PositemRebootTime=HH:MM Example: PositemRebootTime=03:30  Reboots PC at the time specified (within 5 min after the desired time - not at exact time). Positem is programmed to reboot only once in 24 hours. The reboot log goes to the termerr.log		

---

<b>Exe Version</b>	6.41	<b>Date:</b>	01/09/2018 15:14
<b>Number:</b>	5904	<b>Product:</b>	(No Product Entered)
<b>Solution:</b>	<ol style="list-style-type: none"><li>1. Fixes an issue with Bonus Card issuances.</li><li>2. New XML option to allow a XML order to open automatically at a POS terminal.</li><li>3. New remote printing options to print a slip for any manually entered card at the remote device. Middleware dependent.</li><li>4. Some sites report the inability to access Table Management without a daily override.</li><li>5. Improvements for the 'conversational ordering' and mixed modifiers ability.</li></ol>		

---

**SPCWIN UPDATES BY DATE**

**Report Number 39**

**03/01/2017 - 03/31/2018**

**Printed : 03/01/2018 17:14:27**

**Exe Version** 6.41.0 **Date:** 12/18/2017 20:16  
**Number:** 5901 **Product:** 6.41.0 VS  
**Solution:**

1. Improvements for the option "Flash Category Blocks Pay Type" when using Bonus Cards.
2. Improvements for the "Flash Category Exclusive" option
3. Improvements to writing the check file data to prevent check file corruption.
4. Added the ability to display the server number on the User/Cash Drawer assignment screen.
5. Improved logic for sites using paper gift certificates that may encounter a temporary malfunction when entering the serial number.
6. Improved the ability to have multithreaded transerv channels as well as non-multithreaded channels. In some cases, non-multithreaded channels may have unintentionally become multithreaded.
7. Fixed an issue with the Exit Auth Screen flag under User Defined Cards, where the system would not exit the authorization screen upon receiving an authorization.

**Exe Version** 6.40/5.40 **Date:** 12/13/2017 20:20  
**Number:** 5897 **Product:** 6.40/5.40  
**Solution:**

1. Improved the ability to have multithreaded transerv channels as well as non-multithreaded channels. In some cases, non-multithreaded channels may have unintentionally become multithreaded.
2. Fixed an issue with the Exit Auth Screen flag under User Defined Cards, where the system would not exit the authorization screen upon receiving an authorization.

**Exe Version** 6.41.0 **Date:** 11/28/2017 12:24  
**Number:** 5892 **Product:** 6.41.0 VS  
**Solution:**

1. Some sites report that the NRT number does not appear on some reports.
2. Allow (based on a setting) for an XML order to be applied to a check while the check is open at a terminal.
3. Changed the company name in SPCWIN to "POSitouch, LLC"

**Exe Version** 6.41.0 **Date:** 11/13/2017 16:54  
**Number:** 5887 **Product:** (No Product Entered)  
**Solution:**

1. Improvements for Discounts 1 - 15 being used as an open dollar discount AND posts to a single inventory item. A rarely used combination.
2. New feature -  
Max mods based on quantity - When using quantities and modifiers, sites may now choose to charge for the X number of most expensive modifiers. For instance, a pizza with 6 toppings, the top 5 most expensive modifiers would be added to the price.

**Exe Version** **Date:** 11/13/2017 15:10  
**Number:** 5886 **Product:** (No Product Entered)  
**Solution:**

1. Some sites may come out of redundancy and the check file from the backup machine may not be copied back to the main POS driver.  
This fix addresses the issue of coming BACK from redundancy on the main POS driver.

Report Number 39

03/01/2017 - 03/31/2018

Printed : 03/01/2018 17:14:27

---

**Exe Version** 6.41.0 **Date:** 11/07/2017 11:42  
**Number:** 5884 **Product:** 6.41.0 VS  
**Solution:** 1. Fix for missing gratuity transaction when closing a check with a bonus card redemption.  
2. Fix for divide by X buttons on the CC auth screen. The issue was that in some cases when divide by X buttons were used, the remaining balance of the check before the final "divide by x" application might be within few cents of the amount behind by divide by X button causing some UI confusion when closing the check. The text on the divide by X button will not change but the amount produced by the button after it is touched will be the exact remaining balance on the check. For example: the check amount is \$10.00. The server used "divide by 3". The button shows \$3.33. Before the third use of "divide by 3" the remaining balance on the check will be \$3.34. The "divide by 3" button will still say \$3.33 but touching \$3.33 will not alter the remaining check balance of \$3.34.

---

**Exe Version** 6.41.0 **Date:** 11/01/2017 17:51  
**Number:** 5881 **Product:** 6.41.0 VS  
**Solution:** Added functionality in bosetup2.exe to restrict by cost center.

## SPCWIN UPDATES BY DATE

03/01/2017 - 03/31/2018

Report Number 39

Printed : 03/01/2018 17:14:27

---

<b>Exe Version</b>	6.41.0	<b>Date:</b>	10/31/2017 16:43
<b>Number:</b>	5880	<b>Product:</b>	6.41.0 VS
<b>Solution:</b>	<ol style="list-style-type: none"><li>1. Improved logic and design. For sites with a large quantity of open checks, this SPCWIN.EXE adds the ability to have up to 4000 open checks with credit card payments attached.</li><li>2. Allow up to 5 digits for CC record number in CC Tip adjustment.</li><li>3. Increase the maximum length of the payment memo from 499 to 5000 characters</li><li>4. Improved logic for allowing manually entered CVV code for users configured with the user priv that does not allow manual CC transactions (user priv 34/142).</li><li>5. Fix for the spcwin coming up in Redundancy mode and failing with the security fault #1 error on the redundant machine.</li><li>6. Improvements for gift cards and tip adjustments for gift cards configured with "track 1" character that separates various types of gift cards with the same BIN range.</li><li>7. Improved logic for sites using gift cards and the CC Repeat function. Some middlewares may have had issues with with the repeat function.</li><li>8. Some sites report issues with the Reproduce Checks option on the Cashout Screen, when attempting to reproduce checks for a server that did not yet close any checks.</li><li>9. New Logic/Features<ol style="list-style-type: none"><li>a. Cell type 2 multipliers can be configured for a preset quantity, and applied only to the next item.</li><li>b. New design for ordering "items that come in buckets", i.e. wings, bears, chicken...</li><li>c. Guest check totals, by guest - will always have a total line for each guest</li><li>d. Added logic using the REPEAT button, which can be used also a "SPLIT/REPEAT" button. This allows users to choose a quantity of items (i.e 4 Tacos) and modify all 4. Touching the REPEAT button on the "4 Tacos" will allow the user to SPLIT the 4 (as in 3 tacos and 1) where the 1 taco can then modified further, adding or removing options.</li><li>e. Falsh Category Required for Manager Payment: requires a particular flash category to allow a manager payment type to be applied.</li><li>f. Prevent unacknowledged exceptions from repeating as a new exception every 10 minutes.</li><li>g. Prevents writing an out of stock record each time someone reviews the current out of stock list.</li><li>h. Added the ability to use Price 9 as a message on modifiers (already allowed on main items)</li><li>i. Added a user privilege for Reopen Review by user type.</li><li>j. Allow a menu cell - Alternate Menu - to change a fast order type of order to another order type, as in Retained Check.</li><li>k. Allow the data files that update the sales data for graphs and online reporting - to be created and written while in Time Clock Only mode.</li><li>l. Added logic in Hardware &gt; Prep Printers - Dupe only if Routed to. If an order is sent, and contains items for a station A's printer, PLUS items for another station, station A's printer will print the other station's items as well, notifying station A that there are other items on the slip.</li></ol></li></ol>

<b>Exe Version</b>	6.40/5.40	<b>Date:</b>	10/26/2017 12:47
<b>Number:</b>	5879	<b>Product:</b>	6.40/5.40
<b>Solution:</b>	<ol style="list-style-type: none"><li>1. Improvements for tip adjustments performed on gift cards, using the Track 1 surname field to separate gift card types.</li><li>2. Improvements for the CC REPEAT functionality with gift cards. Some middlewares may have difficulty with the request.</li><li>3. Added protection for the option "Reproduce Checks" in the "Cashout" screen. Some sites may encounter an issue when choosing REPRODUCE CHECKS for a user that has no closed checks.</li><li>4. Improvements for the &lt;MagCardRequest&gt; XML with the property &lt;Function&gt;. When loyalty redeem is enabled in the POS, the &lt;MagCardRequest&gt; XML with the &lt;Function&gt; "Gift Card" was blocked with an error in the top bar</li><li>5. Some sites may report issues with printing QR codes on slips.</li><li>6. Improved logic. When using the Unsettled Checks feature to close multiple checks, some users may encounter an issue with adjusting the closed check when credit cards are used for payment. The adjustment attempt may not show the credit card(s) used for the payment of the check.</li><li>7. Some sites have reported issues where, when applying a discount on the take payment screen, and a memo is entered, the user may not be returned to the Take Payment screen.</li><li>8. Added logic for Server Commissions. Some sites may report an issue when a check is reopened by another server and then printed, and the system is configured to print more than one copy of the guest check.</li><li>9. Some users may report the auto combo changes the prices to hundreds of dollars.</li></ol>

Printed : 03/01/2018 17:14:27

---

<b>Exe Version</b>	6.40/5.40	<b>Date:</b>	06/08/2017 16:58
<b>Number:</b>	5813	<b>Product:</b>	6.40/5.40
<b>Solution:</b>	<ol style="list-style-type: none"><li>1. New: Implemented the option in Setup &gt; Credit Cards &gt; Merchant Data &gt; More 2 &gt; Print Customer EMV slip on validated checks. This will combine the payment validation slip with the EMV text returned by the middleware, reducing the number of slips that print.</li><li>2. New: Setup &gt; Credit Cards &gt; Merchant Data &gt; More 3: Added the ability to customize the footer message on credit card slips. Users may now customize the "MERCHANT COPY" and "CUSTOMER COPY" text.</li><li>3. New: Added Check CVV and CVV length fields ('v' and 'w') to USERFDEF.C.DAT.</li><li>4. Some users report being able to access the payment screen when User Privilege 3 is off (Access Payment) and the user reopens a check and goes to the CC AUTH screen. From there, a PAYMENT button was visible.</li><li>5. New: When performing a CC REPEAT function and the card was an previously used for an authorization, the reprinted slip will now show "KEYED".</li><li>6. New Option: "Prorate Suggested Gratuities on CC Slips"</li><li>7. Improved alignment for the tax line on guest checks.</li><li>8. Improvements for User Privilege 145 (No CC Delete Auth). Some users report User Privileges 34 and/or 142 were conflicting and thus users could access the delete function.</li><li>9. Some users have reported an issue with doing an overring of an EMV transaction, where a NO TRANSIT message was received.</li><li>10. New: The system will not retry an EMV transactions upon restarting.</li><li>11. Added logic to store customer names from field 'c' on the START TAB option when using EMV transactions.</li><li>12. New: When reading SPCWIN.INI, the entries are no longer case sensitive.</li><li>13. New: Setup &gt; Merchant Data &gt; More 3 &gt; Print Customer EMV slip on Validated Checks This option will combine the payment validation slip and the EMV receipt for guests, reducing the amount of paper.</li><li>14. Some sites may encounter an issue with the lookup feature in Paytronix.</li><li>15. New: When SPCWIN starts, any payments linked to a credit card/gift card processing channel (Transerv 1 - 6), SPCWIN will automatically activate the Authorization Required and Draft Capture functionality.</li><li>16. New: Added logic to allow cell item names to use 23 characters when a site is using QuickMenu.</li><li>17. Fix for new Memo Validation feature (MVALxxxx.DAT) with the screen saver. In some cases the feature fails if the screen saver starts.</li><li>18. Changes how the first column on a service time will report with set service time at send turned on. Addresses concerns with the average order time column.</li><li>19. Improvement: When users use the separate checks option, and leave a check empty (no items on it) and then quit, the manager activity report may show the check as removed with a dollar value. The report will now report zero dollars on an empty, removed check.</li><li>20. Improved baquet multipliers logic when using the Reorder</li><li>21. Improvements for option sets and item numbers in xml sales outputs. Fixes the item number for an option set in sales transaction xml outputs.</li><li>22. Added logic to block the REPEAT function on manager items.</li><li>23. Added logic to exclude surcharges from a flash category.</li><li>24. Added reloading of out of stock and specials when using Quick Update.</li><li>25. The button label for set quantities may not always display as expected.</li><li>26. Removed the Repeat button from the Out of Stock screen.</li><li>27. Logic added to prevent touching a coupon and then touching the quantity buttons.</li><li>28. This fixes a case that only occurs if you use job based menus and some people have a job that has no</li></ol>

SPCWIN UPDATES BY DATE

03/01/2017 - 03/31/2018

Report Number 39

Printed : 03/01/2018 17:14:27

Exe Version 6.40/5.40 Date: 04/03/2017 10:02

Number: 5779 Product: 6.40/5.40

Solution: \*\*\*\*\*  
NOTICE  
\*\*\*\*\*

1. Some sites may encounter an issue with gift cards not deactivating when deleted from the check after the card has been activated, yet payment has not been completed. 6.40/5.40 SPCWIN dated 03/03/2017 should be updated.
2. Some users have reported that when performing an out of stock action on a an item whose button is double wide and single high, the text was misaligned.
3. New: When using the 18 order format, SCROLL will advance the screen by 6 orders and the RECALL option will scroll backwards by 1 order at a time.  
Previous logic scrolled forwards or backwards by 6 orders.
4. Some users have reported lockups or incorrect menu pricing when using SPECIALS.DAT and an XML Order is placed.
5. EMV Improvements - if the gratuity transaction fails due to a timeout to the middleware, the transaction will be resent with the same reference number to the middleware, so as not to duplicate a transaction within the middleware, if the middleware received the original request.
6. General improvements to recording entries in the ERROR.LST

Exe Version 6.41 Date: 04/03/2017 09:18

Number: 5778 Product: 6.41.0 VS

Solution: \*\*\*\*\*  
NOTICE  
\*\*\*\*\*

Some sites may encounter an issue with gift cards not deactivating when deleted from the check after the card has been activated, yet payment has not been completed.  
Sites using SPCWIN version 6.41 dated from 01/12/2017 - 04/02/2017 should be replaced.

Exe Version 6.41 Date: 03/28/2017 10:07

Number: 5776 Product: 6.41.0 VS

- Solution:
1. Improvements for XML Ordering tag <AdvancedOrderOffset>. New logic ignores the inhouse dining offset time.
  2. Team checks (dummy checks) are included with the XML Checks output, only when XML check output is configured.
  3. Some users have reported that when performing an out of stock action on a an item whose button is double wide and single high, the text was misaligned.
  4. New: When using the 18 order format, SCROLL will advance the screen by 6 orders and the RECALL option will scroll backwards by 1 order at a time.  
Previous logic scrolled forwards or backwards by 6 orders.
