**Exe Version** POSIPAY Updates **Date:** 10/29/2018 16:20  
**Number:** 5984  
**Solution:** Several of the updates listed below appear in prior versions. Major releases with the updates from previous releases are below:

10/24/18 1.4.9.18486  
Fixed an issue where the access token popup box was not being displayed.

Added the ability to remove the signature line from the CC signature slip when using signature capture devices.

Added new logic for commands sent to POSIPAY that are not POSIPAY related transactions. POSIPAY will decline all non-POSIPAY transactions.

Added logic to ignore CVV entry.

swipeToKeyed setting should no longer be required for gift cards based on changes at Valutec.

10/22/18 1.4.9.19070  
Improved logic. If a user activates a gift card, that is already active, we now send an increment automatically, to increment as opposed to activate.

Added logic to specify which terminals have signature capture capability. For instance, a drive thru terminal may not be signature capture. POSIPAY.INI entry is: SignatureCaptureTerminals=ALL or 1,2,3,4 based on terminal setup in hardware.

Allow users to edit gift card entry via MSR with a command of swipeToKeyed=YES. This setting should only be used when directed by POSitouch Support.

10/19/18 1.4.8.25006  
Improvements for tip included transactions.  
Added logic to remove the AUTH TOKEN POPUP from all places except when using the command: STANDALONE

Added logic for signature capture devices.

Multiple Access Token capability added. For sites with multiple serial numbers

Added new log file entries for enhanced troubleshooting.

IYC (It's Your Card) Gift Card logic added.

09/13/18 1.4.3.26362  
Fixed an issue where POSIPAY may get into a looping state

Improved logic for some credit transactions

Improved logic for sending gratuities after a failed first attempt

---

**Exe Version** BOSETUPW.EXE **Date:** 09/24/2018 14:33  
**Number:** 5976  
**Solution:** New option for POSiPAYMENTS  
Setup > Credit Cards > Merchant Data > More 2 > Forward CC Tip amount to middleware.  
Used by the POSiPAY report.

---

**Exe Version** BOSETUPW.EXE **Date:** 08/17/2018 16:06  
**Number:** 5973  
**Solution:** Added new option:  
Backoffice Setup > Credit Cards > Gift Cards > Labels > GC PIN PROMPT  
Customizable text for prompting to enter a PIN on gift cards. Check SPCWIN updates for date of implementation.

10/01/2017 - 10/31/2018

Printed : 10/29/2018 16:22:39

---

**Exe Version** POSIPAY **Date:** 08/14/2018 11:33  
**Number:** 5970  
**Solution:** Version  
1.3.5.17063 The following changes are included for release in this version. All users should update to this version.  
SPCWIN version 6.41.0 dated 08/08/18 or later is required.  
  
08/03/18  
Improvements for Reopen Closed Check overrings  
Addresses new changes in POSiPAY  
Log files based on business day; POSiPAY reporting ended at midnight  
Improvements with Reopen Closed Check  
Improvements for entering the Auth Token via POSiPAY as a service  
POSiPAY service version  
Reduced the size of the credit card slips  
Added the ability to populate or change the AUTH TOKEN in the POSiPAY service

---

**Exe Version** POSirpt Release 3.66.9 **Date:** 07/18/2018 09:18  
**Number:** 5963  
**Solution:** Release V3.66.9 - July 17, 2018  
  
THIS RELEASE REQUIRES POSIDBFW CREATED ON 6/25/18.  
  
DSR  
  
1. "Total Sales Plus Tax" is zero for any Cost Center above the "Number of Cost Centers".  
  
2. "Total Sales Plus Tax" was always set to zero for the sum of all selected Cost Centers. It is now being calculated in this release.  
  
Reconciliation Report  
  
1. When only reporting for the Entire House, the forms of payment detail is missing.  
  
2. The report wasn't including tip pools 4 - 10.  
  
MAR  
  
1. Added the "Separate Checks" activity (17), and fixed some activities that weren't being reported correctly.

---

**Exe Version** BOSETUPW.EXE **Date:** 07/13/2018 14:20  
**Number:** 5959  
**Solution:** New option > Setup > Credit Cards > Merchant Data > More  
Repeat of XML CC AUTH uses full amount.  
When repeating an XML Order's CC authorization, the full amount of the check will be used for the amount.  
See SPCWIN UPDATES for date of implementation.

---

**Exe Version** BOSETUPW.EXE **Date:** 07/09/2018 13:45  
**Number:** 5956  
**Solution:** Added new option in Forms of Payment.  
Cashdrawer kick out > for cash back.

---

**Exe Version** BOSETUPW.EXE **Date:** 07/02/2018 18:33  
**Number:** 5955  
**Solution:** New Setting > Backoffice Setup > Hardware > Terminal Stations > S4 TID  
  
Allows users to set the API TID from Shift 4 in the terminal station setup. For some sites, using API TIDs that do not start at 1 or are missing a terminal, users can customize the terminal's setup to match a specific API TID. By default, SPCWIN sends the terminal number and is linked to the API TID, starting at 1.

<b>Exe Version</b>	QuickMenu Updates	<b>Date:</b>	11/10/2017 10:26
<b>Number:</b>	5885		
<b>Solution:</b>	2.6.9.1 06/02/17 1. Fixed an issue where an exception can occur when deleting an item when a new item is missing some properties. 2. Ensured at least 60 days of backups are kept, as opposed to just the last 100 copies. 3. Hovering over a cell will display the item's number.  2.6.9.2 06/06/17 Fixed: The use of a slider (on the right) while editing in a tab (on the top) can result in the tab not getting closed when selecting another tab to its left.  2.6.9.3 06/15/17 1. Fixed: Alternate and Continuation Menus: You shouldn't be allowed to close the Concept Editor and Menu Builder when there are Alternate and/or Continuation menus configured that are not part of a given concept. 2. Added the ability to deploy price tables. 3. Added the ability to export price tables. 4. Added the ability to search for cells in the off screen area.  2.6.9.5 07/07/17 1. If an "Order Screen Cell" (cell type 24) is linked to an inactive menu screen, the menu screen will be made active 2. Increased responsiveness when selecting large number of items. 3. Added a new "RESTORE" command line 4. For cell types 25, added a "Remove Discount" option. 5. Added the ability to add a new inventory number for an item with an inventory number. 6. Added the ability to filter modifiers by "Unused Modifiers"  2.6.9.6 07/18/17 1. Some sites have reported an "Enumeration Operation may not execute" 2. When editing modifiers in the Grid View, you can now select one or more items from the item slider, right click and select "Create new Modifiers from selected Items" to add/edit modifiers in the grid.  2.6.9.7 07/19/17 1. Fixed an issue where modifiers may disappear in the front of the house.  2.6.9.8 08/09/17 1. If you change an edit control type, the change now filters down to all data. For example, if you change the ECT of a screen, all of the cells on that screen and all of the menu items linked to those cells will also be assigned the new ECT. 2. user interface updates 3. Grid View - fixed an issue with sorting menus by clicking on a header. 4. Added Lookup.txt to the deployment option. 5. Added protection to prevent dragging a menu item on to a screen of a particular concept. 6. When creating a new item, any set items from the current item being edited should not be copied into the new items set item grid.  2.6.9.9 08/30/17 1. Fixed: If price 1 is set to something other than zero, and you try to change prices 2 and/or 3 to zero, they revert back to the value in price 1. 2.Fixed: Shift times are in some cases being displayed wrong.  2.6.9.10 09/22/17 1. Added logic to allow if the "16 Menu Limit" flag is set at a concept/store, and there end up being more than 16 menus used by the site due to the use of alternate and/or continuation menus, the additional menus need to be included in QMscrs.DAT and Screens.sys 2. Fixed an issue if the last menu has a name greater than 23 characters. 3. Fixed an issue where, at the corporate level, and viewing All Stores, some menus may display as Inactive, incorrectly. 4. Improvemets for the template builder and choosing a "New Template"  2.6.9.11 10/25/17 1. When upgrading a very old database where some cells are missing a major/minor, an attempt is now made to add a default major/minor in order to prevent the cell from getting deleted later when data is being validated. 2. Fixed an issue where the indexes to INDATA.DBF may not update correctly.		

---

<b>Exe Version</b>	BOSETUP2	<b>Date:</b>	11/06/2017 16:42
<b>Number:</b>	5883		
<b>Solution:</b>	Recompiled. No changes.
